

polyHUE

What is PU Finish ?

PU stands for Polyurethane. It is a two-component Polymer-based paint finish and is generally applied as a protective layer to both wooden as well as metallic surfaces. The polyurethane polymer offers a tough and durable coating that is highly resistant to scratches, sunlight, and moisture. Its chemical composition also allows the paint to be formulated to higher gloss levels and fine matte finishes, offering a beautiful and consistent finish.

PU Finish is incredibly versatile and can be used on both flat and curved surfaces, thus giving us more design options. They also give a premium feel and look to interiors.

What do we offer

We offer three types of Shutter styles with PU finish

- **Flat Panel Shutters** – Panel profiles of this kind are generally used to achieve a minimalist, clean look and offer a lot of contemporary design options
- **Routed Shutters** – Routing refers to the removal of some of the panel material or cutting a groove using a decorative pattern. Routed shutters are synonymous with the ever-popular Victorian look.
- **Finger Pull Shutters** – These shutters are latest in the market and lend themselves to new design possibilities. They are extremely convenient and help achieve a modern look.
- **Shutters of different colours** are available. You can choose from shutters of both MDF or HDF material.

PLACE AN ORDER

Shutters are an incredibly important aspect of interior design. In addition to being highly functional, the style and finishes of shutters define the look of a room or a house and make it look distinct.

There are plenty of shutter finishes available in the market but not all of them offer the same aesthetic appeal or functional benefits. Introducing Prolance's PU Shutters, that combine the best of utility and decorative benefits.
